

MORNING JOE

This is exactly what Trump feared

The former president has always considered himself to be the ultimate disrupter. But this time, the disruption is on the other side.

ELECTIONS

From debate catastrophe to standing down: Biden's road to the exit

Biden officially suspended his 2024 re-election campaign

★ 01 ★

Problem Statement

PROBLEM STATEMENT

**Is there a heuristic that can be used to
quantify bias across various news
sources?**

PROBLEM STATEMENT

- ★ To assess whether news sources exhibit bias, through the use of passive/active voice along with sentiment, when reporting on the election
- ★ To examine whether this bias is detectable by an impartial formula
- ★ To compare how news sources fall on a political scale with our analysis vs. existing plots
- ★ Chose the election as we thought it would be the best representation of political bias

★ 02 ★

Data Preprocessing

Data Sources, Data Cleaning

AllSides Media Bias Ratings

SCRAPING

- ★ Scraped articles w/ Event Registry API
 - Data collected: Title, Source, Author, URL, Published Date, Content
 - All articles related to **election** were within the last month
 - Set scraper to find up to 1000 articles per source
 - Scraped 17 different news sources
- 

CLEANING

- ★ SpaCy to identify relevant entities/actors in title and article content: **Trump, Harris, Biden**
 - Entities extracted: focused on PERSON, ORG, GPE, and LOC
 - Required 3+ actor mentions per article
 - Removed sentences not containing these words to eliminate non-actor sentences and reduce size
- ★ Original Articles: **8213**, After Filtering: **5726**

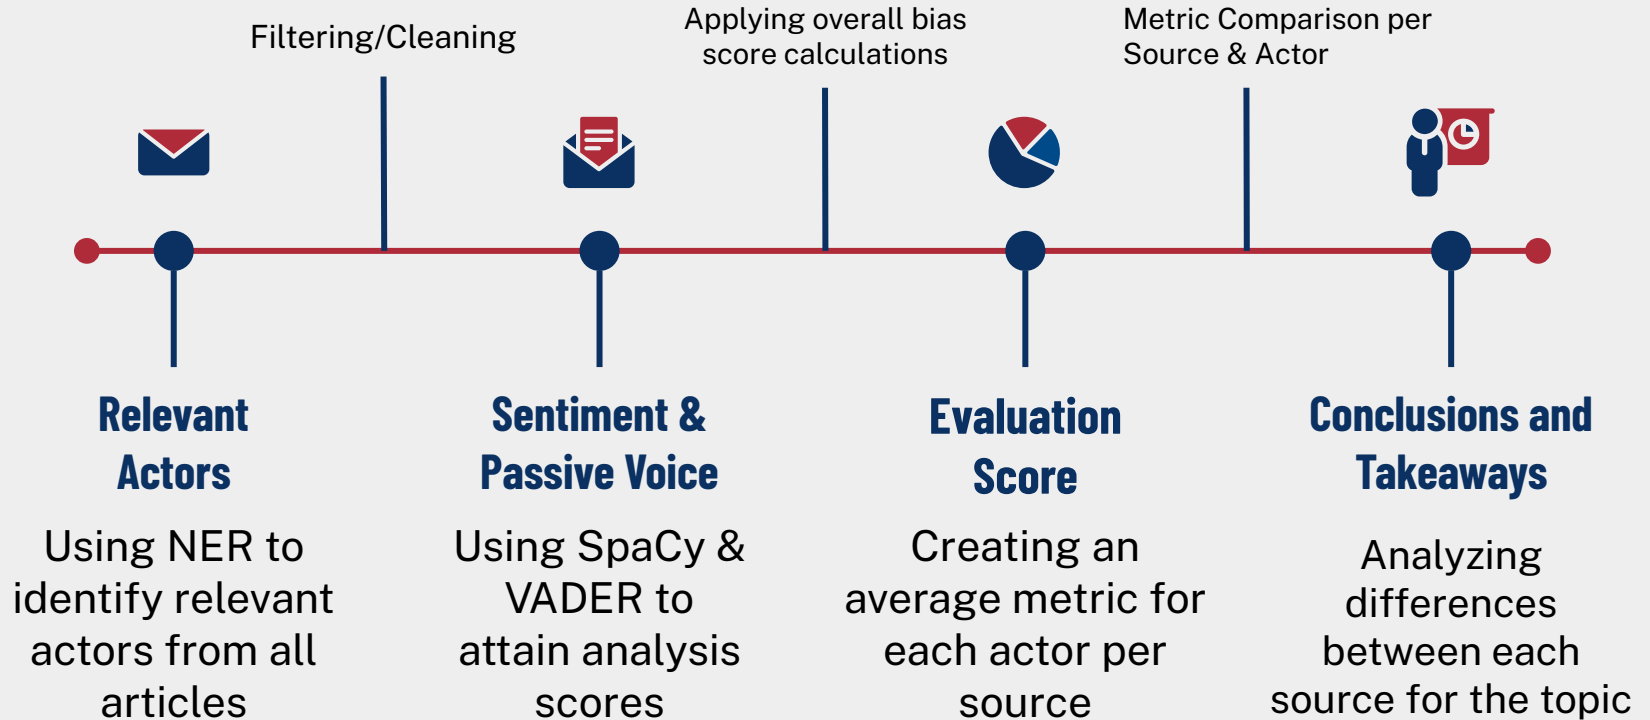

★ 03 ★ Analysis Methodology

Passive Voice, Sentiment
Analysis, Evaluation Score

ANALYSIS METHODOLOGY

USING PASSIVE/ACTIVE VOICE FOR DETECTING BIAS

Passive Voice with Negative Sentiment - Averting Blame

"Mistakes were made during Trump's campaign."

Active Voice with Negative Sentiment - Asserting Blame

"Harris's poor policies caused widespread dissatisfaction among voters."

Passive Voice with Positive Sentiment - Averting Praise

"The economic recovery was achieved during Harris's administration."

Active Voice with Positive Sentiment - Asserting Praise

"Trump led the administration to a successful peace agreement."

Conclusion

Conclusions, Applications,
Key Takeaways, Future
Considerations

WHY IS THIS IMPORTANT?

- ★ News media has a lot of influence every election season, including **shaping public opinion** and **impacting voter behavior**
- ★ For news sources that align themselves with a certain political party, to see how they **differ in reporting of their party and opposing ones**
- ★ **Main use case:** To have a non-LLM, non-people, non-council method of determining bias
- ★ News outlets can assess whether their article/reporting style can be improved to better cater to their audience

Future Considerations

★ Areas for Improvement:

- Could examine bias in topics outside of the election
- Scrape an even amount of data across news sources

★ Limitations:

- Could not detect bias for actors not mentioned in a sentence
 - Not able to use ABSA → if there are 2 actors within same sentence, both given the same score
 - News articles often avoid passive voice in titles
- 

The background of the image is a close-up, textured view of the American flag. The stars and stripes are visible, with a slight wave or fold in the fabric. The colors are vibrant red, white, and blue. The flag is positioned diagonally, with the stars in the upper left and the stripes extending towards the bottom right.
